EXPERIENCE

Metnee Systems PLC, Addis Ababa, ET — *Web Frontend Engineer*

Oct 2024 — PRESENT

Contributed to major production projects including Sheqlee, Katech (driver data platform), Macha, and Glitch. Developed responsive, scalable, and maintainable user interfaces with a strong focus on performance and usability. Collaborated closely with designers and backend engineers to translate requirements into polished, production-ready applications aligned with business and client objectives.

TECHNOLOGIES USED: React, Next.js, Node.js, TypeScript, CSS Module, Tailwind CSS, React Query, React Hook Form, i18next, Google Maps API, Git, GitHub, GitHub Actions, AWS.

SKILLS

JavaScript, TypeScript,
HTML/CSS,

React, Next.js, Svelte, SvelteKit,
Tailwind CSS, React Query, Vite,
i18next, Responsive Web Design

Node.js, Express.js, MongoDB,
MySQL, Rest APIs, Vercel,

Git/GitHub, GitHub Actions
(CI/CD), Google Maps API

LANGUAGES

English — Conversational

Amharic — Native

Tigrigna — Native

EDUCATION

Mekelle University, Mekelle, ET — *BSc. in Information Technology*

OCT 2018 — JUN 2025

Completed a five-year undergraduate program in Information Technology with a stellar CGPA of 3.8/4.0, graduating with high distinction.

PROJECTS

Katech — *A Driver Data Intelligence Platform based in South Korea*

Built a scalable driver data intelligence platform for a Korean client to collect, process, and manage driver data. Implemented expert validation and enrichment workflows to prepare high-quality datasets for AI use. Developed dashboards for record management, data quality monitoring, and structured review processes, ensuring accuracy, scalability, and efficient data access for downstream AI training and enterprise consumption.

Web: (<https://katech-local.vercel.app/>)

Macha — *A ride-hailing platform*

Built an admin dashboard for a ride-hailing platform management system with real-time trip tracking, driver performance analytics, and location monitoring via Google Maps integration. Designed intuitive UIs for fleet operations and clear, actionable data visualizations.

Demo: admin dashboard(<https://macha-taximeter.vercel.app/>)

Sheqlee — *A freelance marketplace*

Developed a scalable web and admin platform connecting Ethiopian tech professionals with global employers. Delivered responsive dashboards, actionable analytics, and robust role-based access control. Integrated

real-time data streams and full multilingual support for a seamless worldwide experience.

Demo: (<https://sheglee-admin-panel.vercel.app/>)

Glitch — *Corporate landing page*

Built a high-performance, fully responsive bilingual landing page for a Korean corporate client with automated email workflows. Implemented form validation and submissions using Node.js and Nodemailer, including auto-responses and robust error handling.

Demo : (<https://glitch-ui.vercel.app/>)

Bellboy — *Delivery System*

Built delivery system with smooth, interactive animations that visually track each step of the delivery process—from request to pickup, transit, and drop-off—providing real-time status updates and a clear, engaging user experience.

Demo : (<https://bellboy-delivery.vercel.app/>)

X-Cafe — *Cafe Ordering System*

Built a QR-based cafe ordering system with an admin dashboard where customers place orders via scanned QR codes and a mobile interface. Implemented real-time order delivery to the dashboard for processing and status tracking. Developed tools for order management, menu control, and live monitoring to streamline kitchen operations and improve workflow efficiency in a fast-paced cafe environment.

Demo : (<https://x-cafe-system.vercel.app/>)

QR Code based ID verification — *University Entrance Platform*

Built a QR-based identity verification system for university admissions, enabling fast and secure real-time authentication during entry and exams. Implemented QR code generation and scanning workflows to validate identities efficiently, reducing manual verification and improving accuracy at scale. Focused on reliability, speed, and fraud prevention in high-volume admission environments.

AI-Powered Fraud Detection System — *Ethiopian Banking & Mobile Payments*

Developed a machine learning-based fraud detection system for Ethiopian banking and mobile payments to identify and flag suspicious transactions in real time. Built data pipelines for ingesting, cleaning, and structuring transaction data for continuous monitoring and risk analysis. Focused on improving detection accuracy, reducing false positives, and ensuring scalable fraud prevention for high-volume systems.
